NARRATIVE

DFS Notified by	Dr. Raulerson	Official Title	Escambia County Coroner
Narrative summary of circumstances surrounding death:			
<p>On February 7, 2019 at 22:54, I was notified by Dr. Raulerson about the decedent Dominique Ray 42/B/M. The decedent was an inmate on death row at Holman Correctional Facility who was scheduled to be put to death on 2/07/2019 at 6 p.m. by lethal injection for the 1995 killing, rape, and robbery of 15-year-old Tiffany Harville. The decedent was pronounced on scene on 02/07/2019 at 22:12. ECSO transported the decedent to ADFS for further examination.</p>

REPORT OF AUTOPSY

ADFS CASE NUMBER: 19ME00956

DATE: February 08, 2019

NAME(S): DOMINIQUE RAY

TIME: 1024 hours

COUNTY OF DEATH: Escambia

DATE OF DEATH: February 07, 2019

AGE: 42 years

RACE: B

SEX: M

LENGTH: 69 inches

WEIGHT: 168 pounds

FINAL DIAGNOSES

- I. Mixed drug toxicity due to judicial execution: postmortem blood positive for midazolam.
- II. Clinical history of hypertension.

CAUSE OF DEATH: Mixed Drug Toxicity due to Judicial Execution.

MANNER OF DEATH: Homicide.

EVIDENCE OF INJURY

None.

EXTERNAL EXAMINATION

The body is that of a well-developed, well-nourished, Black male, whose appearance is compatible with the stated age of 42 years. His body, when nude, weighs 168 pounds and is 69 inches long. The body is cold due to refrigeration, rigor is fully developed, and the posterior red-purple lividity is partially fixed. The scalp hair is black. The irides are brown, and there are no petechiae of the bulbar or palpebral surfaces of the conjunctivae. Facial hair consists of a mustache and beard. The ears, nose, and lips are normally formed. The teeth are natural and in good condition. The neck, chest, and breasts are symmetrical. The abdomen is flat. The external genitalia, anus, and perineum are unremarkable. The extremities are well developed and symmetrical. The back and buttocks are atraumatic. The body is well preserved, and not embalmed.

Identifying marks and scars consist of tattoos on the left anterior chest, the right upper back, the right upper arm, and the left upper arm, forearm, and hand. A linear scar is on the left anterior shoulder.

EVIDENCE OF MEDICAL INTERVENTION

Multiple electrocardiogram pads are on the body. Intravascular catheters are in the right and left antecubital fossae.

INTERNAL EXAMINATION

SEROSAL CAVITIES: The thoracic and abdominal organs are in their normal anatomic positions. The body cavities contain no adhesions or abnormal collections of fluid.

CENTRAL NERVOUS SYSTEM: The brain weighs 1,140 grams. The scalp and skull are unremarkable. The dura and dural sinuses are unremarkable. There are no epidural, subdural, or subarachnoid hemorrhages. The leptomeninges are thin and delicate. The cerebral hemispheres are symmetrical with a normal gyral pattern. The cranial nerves and blood vessels are unremarkable. Sections through the cerebral hemispheres, brainstem, and cerebellum are unremarkable. There are no hemorrhages in the deep white matter or the basal ganglia. The cerebral ventricles contain no blood.

NECK: The soft tissues and prevertebral fascia are unremarkable. The hyoid bone and larynx are intact. The tongue is normally formed and atraumatic.

CARDIOVASCULAR SYSTEM: The heart weighs 350 grams. The aorta and its major branches and the great veins are normally distributed. The intimal surface of the abdominal aorta is free of atherosclerosis. The pericardium, epicardium, and endocardium are smooth, glistening, and unremarkable. There are no thrombi in the atria or ventricles. The foramen ovale is closed. The coronary arterial system is right predominant and free of atherosclerosis. The atrial and ventricular septa are intact. The cardiac valves are normally formed. The myocardium is dark red-brown and firm, and there are no focal abnormalities.

RESPIRATORY SYSTEM: The right lung weighs 500 grams, and the left lung weighs 430 grams. The

Case # 19ME00956
Name Dominique Ray

upper airway is unobstructed. The laryngeal mucosa is smooth and without petechiae. The pleural surfaces are smooth and shiny. The pulmonary arteries contain no emboli. The major bronchi are patent. Sectioning of the lungs discloses a pink, moderately congested parenchyma oozing small amounts of yellow-tinged frothy fluid.

HEPATOBIILIARY SYSTEM: The liver weighs 1,410 grams and is covered by a smooth, glistening capsule. The parenchyma is dark red-brown and moderately congested. The gallbladder contains no calculi. The extrahepatic biliary ducts are unremarkable.

GASTROINTESTINAL SYSTEM: The esophageal mucosa is gray, smooth, and unremarkable. The stomach contains approximately 100 milliliters of tan-green mucoid material. No tablets or capsules are in the stomach. The gastric mucosa has normal rugal folds and there are no ulcers. The small and large intestines are normally distributed. The appendix is present. The pancreas is unremarkable externally and on sectioning.

GENITOURINARY SYSTEM: The right kidney weighs 150 grams, and the left kidney weighs 140 grams. The renal subcapsular surfaces are smooth and slightly lobulated. The cortices are of normal thickness. The calyces, pelves, and ureters are unremarkable. The urinary bladder contains approximately 50 milliliters of clear yellow urine. The mucosa is gray, smooth, and without focal lesion. The prostate gland is unremarkable.

ENDOCRINE SYSTEM: The thyroid and adrenal glands are unremarkable externally and upon sectioning. The parathyroid glands are not identified. The pituitary gland is normal in size and shape.

IMMUNOLOGICAL SYSTEM: The spleen weighs 160 grams and is covered by a smooth, blue-gray, intact capsule. The parenchyma is dark red. The lymph nodes are unremarkable.

MUSCULOSKELETAL SYSTEM: The clavicles, ribs, sternum, pelvis, and vertebral column have no fractures. The diaphragm is intact. The muscles are normally formed.

HEMATOPOIETIC SYSTEM: The maroon marrow of the ribs is unremarkable.

ANCILLARY STUDIES

TOXICOLOGY: Blood, vitreous, and urine are collected (see separate report).

LOGISTICS

AUTHORIZATION: Act No. 97-571, Acts of Alabama.

IDENTIFICATION: The body is positively identified by J. Eric Douglas – Escambia County Sheriff's Office.

PERSONS PRESENT: Wendy Ayer, Roxanne Diamond, and Torri Thomas - ADFS.

EVIDENCE: Photographs, fingerprints, palm prints, DNA cards, blood, urine, vitreous, and tissue.

Case #
Name

19ME00956
Dominique Ray

The facts stated herein are correct to the best of my knowledge and opinion at the time of report completion.

Tissue evidence will be disposed 12 months from the date of the original report unless alternate arrangements are made prior thereto.

Toxicology evidence, not tested, will be disposed 24 months from the date of the examination unless alternate arrangements are made prior thereto.

Specimens Received:

<u>ID</u>	<u>Tube/Container</u>	<u>Volume/ Mass</u>	<u>Collection Date/Time</u>	<u>Matrix Source</u>	<u>Miscellaneous Information</u>
001	Blue Vial	2 mL	Not Given	Cardiac Blood	

All sample volumes/weights are approximations.

Specimens received on 04/12/2019.

Detailed Findings:

Analysis and Comments	Result	Units	Rpt. Limit	Specimen Source	Analysis By
Midazolam	3700	ng/mL	50	001 - Cardiac Blood	LC-MS/MS

Other than the above findings, examination of the specimen(s) submitted did not reveal any positive findings of toxicological significance by procedures outlined in the accompanying Analysis Summary.

Reference Comments:

1. Midazolam (Versed®) - Cardiac Blood:

Midazolam is a short acting benzodiazepine (a DEA Schedule IV controlled compound) with strong central nervous system depressant/hypnotic properties. It is usually utilized for preoperative sedation, as a sedative hypnotic, and as an agent for the induction of anesthesia. It has significant abuse potential. Effects noted following use may include sedation, somnolence (drowsiness or sleepiness), visual disturbances (diplopia or double vision), dysarthria (slurred speech), ataxia (shaky movements and unsteady gait), and intellectual impairment and coma may result.

Oral doses of 10 mg given to 20 subjects produced average peak plasma concentrations (at 1 hr. post dose) for midazolam of 69 ng/mL in males and 53 ng/mL in females. As a preoperative medication, intramuscular injection of midazolam at 0.13 mg/Kg body weight (9.1 mg/70 Kg body weight) produced peak plasma concentrations of 68 ng/mL.

At high concentrations, confusion, impaired coordination, diminished reflexes, respiratory depression, apnea, hypotension and coma may result.

Chain of custody documentation has been maintained for the analyses performed by NMS Labs.

Unless alternate arrangements are made by you, the remainder of the submitted specimens will be discarded six (6) weeks from the date of this report; and generated data will be discarded five (5) years from the date the analyses were performed.

Analysis Summary and Reporting Limits:

All of the following tests were performed for this case. For each test, the compounds listed were included in the scope. The Reporting Limit listed for each compound represents the lowest concentration of the compound that will be reported as being positive. If the compound is listed as None Detected, it is not present above the Reporting Limit. Please refer to the Positive Findings section of the report for those compounds that were identified as being present.

Acocde 9329B - Benzodiazepines Panel, Blood - Cardiac Blood

-Analysis by High Performance Liquid Chromatography/ Tandem Mass Spectrometry (LC-MS/MS) for:
